

# Dark

by Michael Willems

Sometimes it is dark. And yet you need to make it look light.

Some situations are really really dark, and if you cannot use flash (either because you cannot bounce, or because you are not allowed to use it) you have to either go to very high ISO values (like 3200 and above), or use very fast lenses, or push process. Only fast lenses and flash do not affect quality.

**Affect quality:**

Push processing

High ISO (1600 and beyond, depending on the camera)

**Do not affect quality:**

Flash (except light quality)

Fast lenses (except depth of field)

So love fast prime lenses!
